

Improve your erosion ID and treatment skills.

Are you interested in learning how to help our creeks rivers, gullies and dams recover after the recent flood

MUNDUBBERA
Thursday 30th May
8.30am – 3.30pm
Supper Rooms (1 and 2)
28 Lyons St
Mundubbera

The Burnett Mary Regional Group is holding a free course on the impacts of erosion on our creeks, rivers, dams and gullies. Learn what kind of erosion has occurred on your farm, and the best practical way to stabilise the area.

- Identify the types and causes of erosion
- Learn how to determine the appropriate selection and application of a wide range of treatment techniques
- Travel by bus to various erosion sites in the region and learn how to read the erosion markings in the soil in order to identify the types of erosion.

Course presenter:

Grant Witheridge is a civil engineer with some 30 years experience in the fields of hydraulics, creek engineering and erosion & sediment control. He is the principal author of the revised Queensland Urban Drainage Manual, Brisbane City Council's Natural Channel

Design and Creek Erosion guidelines; the IECA Best Practice Erosion & Sediment Control documents, and engineering guidelines on Fish Passage Requirements at Waterway Crossings.
